Particulars of current research work at present level

- ❖ Presently we are working on coupling of photo-oxidation process with biological Treatment in textile and tannery industrial waste water: A catalytic and technological aspect. The investigation of photolysis as an environmental application is a reality novel subject with tremendous potential in near future. We are mainly concentrating on Bio-sensor for the treatment of tannery and textile waste water. The wastewater is highly contaminated with organic and inorganic matter.
- ❖ The end-of-pipe treated using two alternatives namely, the first treatment alternative chemical coagulation using ferric chloride aided with lime, followed by photo-catalytic oxidation.
- ❖ The second treatment alternatives are direct via heterogeneous photo-catalytic oxidation using titanium dioxide /ultra violet and hydrogen peroxide.
- ❖ We are trying to assess optimum operating conditions required for photo-catalytic oxidation such as contact time, doses of hydrogen peroxide and titanium dioxide to the tannery and textile waste water. The aim is to prepare bio-sensor for these wastewater treatment plants.
- ❖ Presently I am working on bioremediation technology in wastewater treatment for various industrial sectors. Planning to develop technology and go for patent.
- ❖ To generate new innovative ideas and utilize skills in our student so that while entering in industrial sector they can utilize their skills for industrial development and to reduce pollution load.
- ❖ Various projects will be incorporated by MOU with industries, Pollution Control Board, Ministry of Environment and Forests, New Delhi and various funding agencies.
- ❖ Some consultancy services to Municipal Co-operation of Aurangabad and nearby co-operations in the form of Environmental Status Report, Air and Water analysis, etc. will be carried out.
